

From Eye to Insight

Aivia Access the Future of AI Microscopy

AI-First Image Analysis Software

THY1-EGFP labeled neuron in whole mouse brain processed using the PEGASOS 2 tissue clearing method, imaged on a Leica confocal microscope. Neurons were traced using Aivia's 3D Neuron Analysis - FL recipe. Image credit: Hu Zhao, Texas A&M University.

ACCESS THE NEXT GENERATION OF INSIGHT CREATION

AI Access for All

Aivia makes advanced data analysis accessible for all biologists - with **no computer science expertise required**.

The Aivia platform has been designed with the end user in mind, meaning powerful, state-of-the-art AI-powered technology is accessible with minimal training necessary. Quickly train laboratory users on the platform, to conduct their analysis without any specialist expertise. Benefit from next-generation, easy to use machine learning segmentation and classification tools.

Radically Simplified Segmentation

Aivia's AI-powered analysis capabilities leverage a biologist's expertise to generate **robust and reproducible segmentation results**.

This means with Aivia you can quickly and reliably generate high-quality results, helping to speed up your route to publication and uncover hidden details in your data. Overcome delays caused by error-prone and tedious segmentation tasks - freeing up your team from time-consuming lab work allowing them to focus instead on innovation and discovery.

Total Freedom on a Single Platform

Aivia's powerful and fast 2-5D visualization and analysis unlocks all the value of your data - **within a single platform**.

No longer does your team have to learn to operate and adopt multiple imaging and analyses systems into their workflow - the Aivia platform unifies all state-of-the-art applications you will need in a unified user experience and works with all microscopy systems. You can install and use Aivia both on your local computer as well as via a web browser, AiviaWeb.

Drosophila embryo imaged on a SIMView lightsheet microscope with a 16x 0.8 NA water objective every 30 seconds. The cells are tracked using Aivia's 3D Object Tracking recipe.

Single timepoint of a time-lapse recording of mammary epithelial micro spheroid cultured in 3D highlighting individual mitotic events. Data courtesy of intelligent imaging group (B. Eismann/C. Conrad at BioQuant/DKFZ Heidelberg)

Aivia delivers high performance image processing and visualization to microscopists and researchers looking to extract more information from their images.

Using state-of-the-art, AI-first software architecture, Aivia is a uniquely innovative and complete 2-to-5D image visualization, analysis and interpretation platform designed for the reliable processing and reconstruction of highly complex images in just minutes.

- > Make AI-powered image analysis accessible for all - with no computer science expertise required
- > Leverage machine learning capabilities to generate robust and reproducible segmentation results
- > Realize powerful and fast 2-5D visualization and analysis to unleash the value of your data - all within a single platform

The AI-powered tools in Aivia simplifies key steps in imaging analysis and provides your lab with solutions tailored to your data.

Images of microtubules and nuclear pore complexes within mouse embryonic fibroblasts (left) are captured Leica SP8 3X STED microscope with a 100x 1.4 NA objective in confocal mode ...

... and (right) processed in Aivia with a 3D RCAN deep learning model to improve the image resolution. [Chen, et al. Nat Methods (2021)]

Key Features

Artificial Intelligence

Teravoxel 3D rendering

Virtual reality

Neuron tracing

Object tracking

H&E stained micrograph of an intramucosal esophageal adenocarcinoma enhanced with Aivia's Pixel Classifier. The Pixel Classifier outputs separate image channels for the nuclei (blue) and glandular structures (orange). Image credit: Wikimedia

WITH AIVIA, YOU ARE THE ANALYSIS EXPERT

Access the future of AI microscopy via subscription

Go

Go is a powerful platform with state-of-the-art image visualization and analysis tools to meet your challenging analysis needs.

Elevate

Available in two versions to meet your unique research needs

CellBio empowers you to examine relationships between cellular organelles and explore cells at a tissue or organism level.

Neuro automates 3D neuron reconstruction in fluorescence and EM images.

Apex

Ideal for large research groups and core imaging facilities, Aivia Apex is a comprehensive image analysis solution for a wide range of research applications.
